

## In Some Case

*Linesets insulation is imposed thermal shrinkage in long direction.  
Unless insulation is jointed tightly, it has some risk of condensation accidents.*

### POINT

## Outstanding Adhesive Force.

Maintains jointing point tightly from thermal shrinkage force.

### POINT

## Stick and Grab Tightly.

Fits perfectly into the embossed insulation surface.

### POINT

## Tough and Strong.

Polyester string contained tape.

### Specifications

- Material ... Aluminum foil + Polyester string contained tape (center part)
- Temperature Range ... 14°F to 140°F

### Application

1. Remove all the dirt and dust from the surface, and joint the insulations without any gap.
2. When taping, make sure joint part of the insulation comes to the center of the tape.
3. Wrap a tape around insulation to pile up on each other at least 1/2", and press it with hands to fit into the (uneven) emboss film.

Upgraded workability by easy-peeling release paper.
